

Fabless Startup Soteria Selected for Scale-up Tips Program

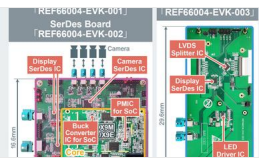

Date : 2023-12-14 14:21

Semiconductor design (Fabless) Startup Soteria announced on the 14th that it has been selected for the 'Scale-up Tips' investment program of the Small and Medium Venture Business Corporation.

Soteria was selected for the TIPS program for its ultra-low-power, on-demand high-performance computing (HPC) accelerator semiconductor development project for eco-friendly data centers that use immersion cooling technology.

Soteria CEO Kim Jong-man said, "Starting with the selection of Scale-up Tips, we will have many opportunities to promote the company and explain our solutions," and added, "We will do our best to mass-produce HPC accelerator semiconductors."

ROHM and SemiDrive jointly develop reference design for smart cockpit

Scale-up TIPS is a privately-led research and development (R&D) method. It is a program in which private operators (a consortium of venture capital and R&D companies) discover promising companies in the scale-up stage and invest in them in advance, and the government supports them accordingly.
